---

<b>Product code:</b>	P10
<b>Product name:</b>	MAG25K/NHS
<b>Surface:</b>	N-Hydroxysuccinimide (NHS)
<b>Average Size:</b>	25µm
<b>Matrix:</b>	Cross-linked agarose
<b>Shape:</b>	Spherical
<b>Magnetic property:</b>	Superparamagnetic
<b>Saturation magnetization:</b>	>65emu/g
<b>Magnetic separation speed:</b>	< 20s
<b>Stable in:</b>	Organic solvents
<b>Not Stable in:</b>	Aqueous buffers
<b>Product form:</b>	Suspension in DMAC
<b>Surface functional group density:</b>	40~80 µmol/mL (100% v/v)
<b>Colour:</b>	Dark
<b>Additional remarks:</b>	Storage at 2~8 °C. Do not freeze !
<b>Expiry Date</b>	Two years after production date
<b>Protein binding capacity:</b>	1000µg albumin /mL (10%,v/v) 2000µg protein A /mL (10%,v/v)
<b>Application:</b>	Designed for covalent coupling of any protein or biomolecule containing a free amine group and is used for various types of pull-down experiments
<b>Technotes:</b>	Waterless seal
